The AphasiaBank Project is based here. These samples were collected as a pilot study of the AphasiaBank protocol.

AphasiaBank is supported by NIH-NIDCD grant R01-DC008524 for 2007-2017. The immediate goal of AphasiaBank is construction of a shared database of multimedia interactions for the study of communication in aphasia. The ultimate goal of this work is the improvement of evidence-based therapy for aphasia.
